## Windows of Detection

|                             | Urine                                     | Oral Fluid    | Hair Follicle |
|-----------------------------|-------------------------------------------|---------------|---------------|
| <b>Amphetamines</b>         | 1 - 3 days                                | 24 - 36 hours | 1-3 months    |
| <b>Barbiturates</b>         | 1 - 3 days                                | n/a           | n/a           |
| <b>Benzodiazepines</b>      | 1 - 14 days                               | n/a           | n/a           |
| <b>Cocaine Metabolite</b>   | 1 - 3 days                                | 24 - 36 hours | 1 - 3 months  |
| <b>Marijuana Metabolite</b> | 1 - 3 days<br>up to 30 days (chronic use) | 1 - 2 days    | 1 - 3 months  |
| <b>Methadone</b>            | 1 - 3 days                                | n/a           | n/a           |
| <b>Methaqualone</b>         | 1 - 7 days                                | n/a           | n/a           |
| <b>Opiates</b>              | 1 - 3 days                                | 24 - 36 hours | 1 - 3 months  |
| <b>Opiates (Synthetic)</b>  | 1 - 3 days                                | 24 - 36 hours | 1 - 3 months  |
| <b>Phencyclidine</b>        | 1 - 5 days<br>up to 30 days (chronic use) | 24 - 36 hours | 1 - 3 months  |
| <b>Propoxyphene</b>         | 1 - 3 days                                | n/a           | n/a           |

*These are only approximations for detection periods. Drug detection depends on amount of drug ingested, rate of an individual's metabolism, and amount of fluid intake. Because of these variables, times presented are only a general guideline.*

## Average Time from Collection to Receipt

|               | Negative Results | Non-Negative Results |
|---------------|------------------|----------------------|
| Urine         | <24 hours        | 24 - 72 hours        |
| Oral Fluid    | <24 hours        | 36 - 96 hours        |
| Hair Follicle | <24 hours        | 48 - 96 hours        |
